

HSWG36: Non-Ionising Radiations - A Background

There are a number of different types of non-ionising radiation, and most managers and other employees should have a basic knowledge of what each type is, what it does, what type of hazard it presents and how it can be controlled.

This course describes the different types of non-ionising radiation and explains their health effects. It also describes the typical occupational sources of non-ionising radiation and the basic control measures that should be put in place.

Course Content

- Infra-red light
- Visible light
- Laser light
- Its characteristics and uses
- The hazards of laser light
- Safety controls
- Ultra-violet light
- Microwaves
- Radio waves

Course Duration

- 30 minutes

Available in:

- Audio

Delivered via:

- Internet
